Release Date: October 30, 2014

Notes: Fix for PayPal Standard, and sending of 10.0.0.1 for IP Address.

---

Features	
81798600	Fixing an issue where IP 10.0.0.1 was sent when the data collector did not function even when the customer ip address did not match a whitelisted or phone to web rule.
81798664	Fixing an issue where the Kount data tab on the order is not populated when PayPal Standard is used.

## ver 6.0.3.1

Release Date: September 19, 2014

Notes: Speed up Declines, Braintree PTOK, SFC CimCore

Features	
79220602	Replacing Reset Status with Core UnHold which can unhold the order, and refund or cancel orders without saving first. This speeds up the transition from Escalate or Review to Decline
79220580	Adding support for sfc_cim_core payment method as it should have already been there.
79220588	Fixing a bug where Braintree vault transactions are linking based on the PTOK field.

## ver 6.0.3

Release Date: August 29, 2014

Notes: Braintree support and several other tweaks.

Features	
67934166	Updating check_key_file.php script to be able to handle special characters in password field.
67828988	Updated admin cookie handling so that admin sessions are not lost. Deprecating support for versions below CE 1.5, and EE 1.10
67749796	Adding support for paypaluk_express payment method which is default when using PayFlow Pro
70979804	Set MACK = Y by default in the Ris Request.
75726696	Trimming IPAD to a single address in the case that more than one are present. We are limiting the field to the IP prior to a comma.
74560024	Added Braintree payment method support. Testing was done against the following extension available on Magento Connect. <a href="http://connect20.magentocommerce.com/community/Braintree_Payments">http://connect20.magentocommerce.com/community/Braintree_Payments</a>
74560476	Adding support for the Escalate status. The Escalate status will be handled in the same fashion as a Review status.
71802400	Adjusted logging statements to use info instead of error where appropriate.
74560078	Always send Billing Name in NAME field even when the Account was created with a different name
74560344	Always send Account Creation date in the EPOC field.
72141864	Moving Data Collector to the Order Review step so that the Session properly updates in accordance with the Ris Request every time a transaction is attempted.

## ver 6.0.2

Release Date: March 3, 2014

Notes: Fix session related bug.

Features	
66332594	Fix session id mismatch between RIS inquiry and RIS update requests. Also, go back to setting MACK=N in the RIS inquiry.

## ver 6.0.1

Release Date: February 21, 2014

Notes: Bug fix release for MACK=Y in RIS Inquiry request.

Features	
66191690	Set MACK=Y on the request instead of MACK=N in RIS inquiry request.

## ver 6.0.0

Release Date: February 11, 2014

Notes: Update Kount SDK and other enhancements.

Features	
64063772	Display ENS Url properly excluding the admin key and always as https
64063772	Upgrade Kount SDK to 5.5.5
64071922	Added a configuration setting to enable Kount observation of Admin orders.
64062286	Send the Magento Version, and Extension Version to Kount as PLATFORM, and EXT in user defined fields.
64068280	Added additional fields from Kount Transaction & Data Collector to the Kount tab on Magento Orders.
64157422	Set the target of the Kount AWC button on Magento Orders in Admin to link directly to the transaction in Kount AWC.
64069302	Added an additional requirement for ENS events to be applied to Magento Orders. Now order number, and transaction id both must match.
64063314	Send Shipping Carrier, and Shipping Method to Kount as user defined fields as CARRIER and METHOD, and Coupon Code as COUPON_CODE
64151264	Added exception handling to ENS events to ensure if the first in a series fails not all of the ENS events will be skipped in the batch.
61989320	We are now creating a unique session id limited to 32 characters to solve potential issues where the web applications may be using session id's longer than 32 characters which is not allowed by Kount.
64071688	We are now changing the session id after every order is placed. This will alleviate the issue with CSR's are placing orders on behalf of customers. We are also sending 10.0.0.1 when Phone-to-Web orders are placed.
64184934	Change Kount Decline customer order status to Decline
64063234	Added a configuration setting to enable/disable Kount SDK logging.
49590625	Added error messages when unable to save cert files during configuration of the extension which may result from bad file permissions.

## ver 5.1.2

Release Date: August 15, 2013

Notes: Release fixes issues converting order currency.

Bugs	
55169134	Solving the issue where we were trying to convert the order currency rather than using the base values when base currency was already USD.

## ver 5.1.1

Release Date: July 31, 2013

Notes: Release fixes admin ordering, and adds workflow status edit notes to the order comments.

Features	
54043613	Adding version number to kount.log for assistance in debugging.
51398703	Adding all comments attached to Workflow Status Edit ENS Events to the order comments section.
Bugs	
53381831	Fixed a bug that was sending admin order information to kount.

## ver 5.1.0.1

[http://vulcan.sfcdev.com:8080/job/kount\\_ext-on-commit-master/3/](http://vulcan.sfcdev.com:8080/job/kount_ext-on-commit-master/3/)

Release Date: June 27, 2013

Notes: Release adds a patch to allow extension to work without requiring a cert file. This is a workaround for the NSS vs OpenSSL issue Kount is experiencing on some linux distributions.

The version is NOT for general release.

Features	
52481111	Make extension work with no cert file.

## ver 5.1.0

[http://vulcan.sfcdev.com:8080/job/kount\\_ext-on-commit-master/2/](http://vulcan.sfcdev.com:8080/job/kount_ext-on-commit-master/2/)

Release Date: May 10, 2013

Notes: Release adds support for Magento EE 1.13.0.0, and CE 1.8 Alpha. Also refactored code to improve code style and maintainability and added new build process for extension..

Features	
49202803	Implemented support for CE 1.8 Alpha
49614481	Implemented support for EE 1.13.0.0
47492121	Included a shell a script with the extension to validate Kount SSL certificate and passphrase.

## ver 5.0.3

Release Date: April 4, 2013

Notes: Special release, for one client.

Release includes

Features Added in Release	
47442917	Changed the way Kount handles admin orders to better work with the OneStepCheckout Extension
Bug Fixes Included in Release	
46922885	Fixed a sqlstate error that occurred when receiving the ENS callbacks on declined orders placed with PayPal Express.

## ver 5.0.2

Release Date: April 3, 2013

Notes: Release adds support for SFC's Authorize.Net CIM Saved Credit Cards Extension

Features Added in Release	
47065531	Added support for SFC's Authorize.Net CIM Saved Credit Cards Extension
